## Summary

Delivery Blueprints is a software development company that specialises in writing bespoke large-scale web based enterprise solutions and products. We also work with start-ups to help turn their vision into reality with responsive Web based applications or native android and IOS Apps. We have a small but highly skilled and dynamic team working with cutting edge technologies to help realise the business aspirations of our clients.

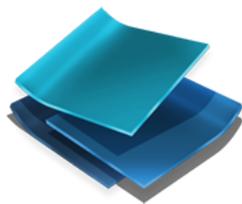

What differentiates us from our competitors is that we sign up to outcome based deliverables with our clients. We believe that the two most important factors for the sustainability and growth of any organisation are client confidence and employee satisfaction. We aspire to keep these as high as possible.

Our Developers are key contributors to a highly collaborative, innovation-led digital environment. Quality and innovative thinking are critical aspects of this role. You must have a can-do attitude and ready to embrace challenges.

This is a fast-paced environment and we are seeking a hands-on developer who is eager to jump in, think big, and help bring ideas to life.

## Responsibilities

- Analysing user requirements and envisioning system features and functionality required to deliver the capability required.
- Working closely with the senior web developer and back end developers to build and extend mobile applications.
- Building reusable components and native libraries for future use.
- Follow the design guidelines and frameworks established by the senior web developer to provide optimum solutions.
- Translating designs and wireframes into high-quality components.
- Optimising components for maximum performance
- Evaluate new mobile methodologies and technologies.
- Collaborate with QA on continuous integration and delivery as well as other automated and manual testing to make sure app releases robust

## Requirements

### General

- Experience and understanding of large and complex code bases and architectures.
- Highly accountable and takes ownership with a positive attitude.
- Self-driven and task focused individual with a desire to delve deep and get an in depth understanding of technologies.
- Capability to pick up new technologies quickly and adapt as necessary to deliver optimum business solutions
- Can listen and accept feedback.

### Technical Must Haves

- Strong proficiency in JavaScript
- Familiarity with newer specifications of JavaScript (ES6/ES7)
- Thorough understanding of React and/or React Native core principles
- Experience with state management libraries (Flux / Redux)
- Experience with data structure libraries (Immutable.js)
- Understanding of RESTful APIs

### Technical - Highly desirable

- Android/iOS native development
- Familiarity with code versioning tools (GIT/Mercurial)
- AWS Architecture
- Ansible or other automation frameworks
